Filtration and Separation

Biochem Water provides an extensive range of filtration solutions designed to meet the demanding and diverse requirements of industries and municipalities. Our specialised systems are designed to effectively treat and filter the water according to each customer's specific requirements.

- Media filtration
- Cartridge filtration
- Bag filtration
- Membranes (RO, NF & UF)
- Pre-filtration
- Ion exchange
- Carbon adsorption
- UV
- Ultra filtration
- Hyper filtration

Biochem Water also provides on-going aftermarket service, including a comprehensive service program tailored to address the overall performance of water treatment systems. This includes:

- Membrane cleaning
- System optimisation
- Improve availability of system performance
- Membrane replacement
- Water quality analyses
- Replacement spares
- Calibration
